

PROGRESSIVE RECONFIGURATION CHRONOLOGY

OneComm envisions the following general chronology of events for AMTA's progressive reconfiguration proposal.

1. Adoption of final rules in the captioned proceeding

(e.g., final rule adoption on May 1, 1995)

The number of constructed channels in each BEA is determined as of the date of final rule adoption. BEA licensees seeking mandatory reconfiguration at the end of the first year must have reached agreement with incumbent licensees on channels representing 80 percent of the number of constructed channels on the rule adoption date. For example, if final rules are adopted on May 1, 1995, and Hawaii is the BEA in question, the Hawaii BEA licensee must have reached agreement on the number of channels that is 80 percent of the number of channels in Hawaii that are constructed on May 1, 1995. The number of constructed channels would be compiled from existing FCC records, subsequently submitted 800A forms indicating construction by May 1, 1995, and quarterly reports submitted by holders of extended implementation authorizations confirming construction by that date.

2. Competitive bidding

OneComm recommends use of a single simultaneous multiple round auction due to the significant number of BEA licenses¹ and their interdependent value. Incumbents with constructed stations located in the BEA/frequency block auctioned should receive bidding credits. Eligibility to participate in the auction should be subject to general CMRS eligibility and to the CMRS spectrum cap.

3. Issuance of BEA licenses, beginning of one-year voluntary reconfiguration period (e.g., BEA licenses issued on October 1, 1995).

In this example, where BEA licenses are issued on October 1, 1995, incumbents would have until October 1, 1996 to agree to voluntarily reconfigure in order to receive the voluntary reconfiguration benefits.

During the first year, BEA licensees would negotiate to reach agreement on channels representing at least 80 per cent of the number of channels constructed on rule adoption date.

4. End of first year after license issuance, end of one-year voluntary period, submission of mandatory reconfiguration showing (e.g., voluntary period terminates October 1, 1996).

1 172 BEAs X two blocks per BEA = 344 BEA licenses.

In this example, BEA licensees would be able to submit mandatory reconfiguration showings beginning on October 1, 1996. Such showings would demonstrate agreement on 80 percent of the number of channels constructed as of rule adoption date. Where no opposition is received, the showings would be approved automatically. Where the FCC does not approve the showing, the BEA licensee would be free to re-apply without prejudice.

BEA licensees also would be able to give notice to remaining incumbents beginning on October 1, 1996, in this example. Giving notice begins a six month notice period during which the incumbent could not be reconfigured. For example, where notice is given on October 1, 1996, the earliest that mandatory reconfiguration could begin is six months later or April 1, 1997. Mandatory reconfiguration may commence at the end of the six month notice period and must be completed by one year after the notice period. For example, where the notice period terminates on April 1, 1997, reconfiguration must be completed by April 1, 1998.

The only exception to the above notice and reconfiguration schedule is where FCC approval to reconfigure is not received until after termination of the notice period. In this case, reconfiguration could begin upon the date of FCC approval and must be completed one year later. For example, where the notice period terminates on April 1, 1997, but the FCC does not approve reconfiguration

until May 1, 1997, reconfiguration could begin on May 1, 1997, and must be completed by May 1, 1998.

5. End of second year after license issuance. (e.g., October 1, 1997).

At the end of the second year after license issuance, BEA licensees could trigger mandatory reconfiguration upon FCC approval of showings that agreement was reached with licensees regarding 65 per cent of the number of constructed channels. For example, 65 per cent showings could be submitted on October 1, 1997, if the BEA license was issued on October 1, 1995.

If an 80 per cent showing is submitted at the end of the first year, and extended litigation delayed FCC consideration until after the end of the second year, the requisite percentage showing would drop to 65 per cent. For example, where an 80 per cent showing is submitted on the first anniversary of license issuance, i.e., October 1, 1996, and litigation delayed FCC consideration until after October 1, 1997, the required showing would drop from 80 per cent to 65 per cent.

6. End of third year after license issuance (e.g., October 1, 1998).

The requisite showing drops to 50 per cent of stations constructed final rule adoption.

7. End of fourth year after license issuance (e.g., October 1, 1999).

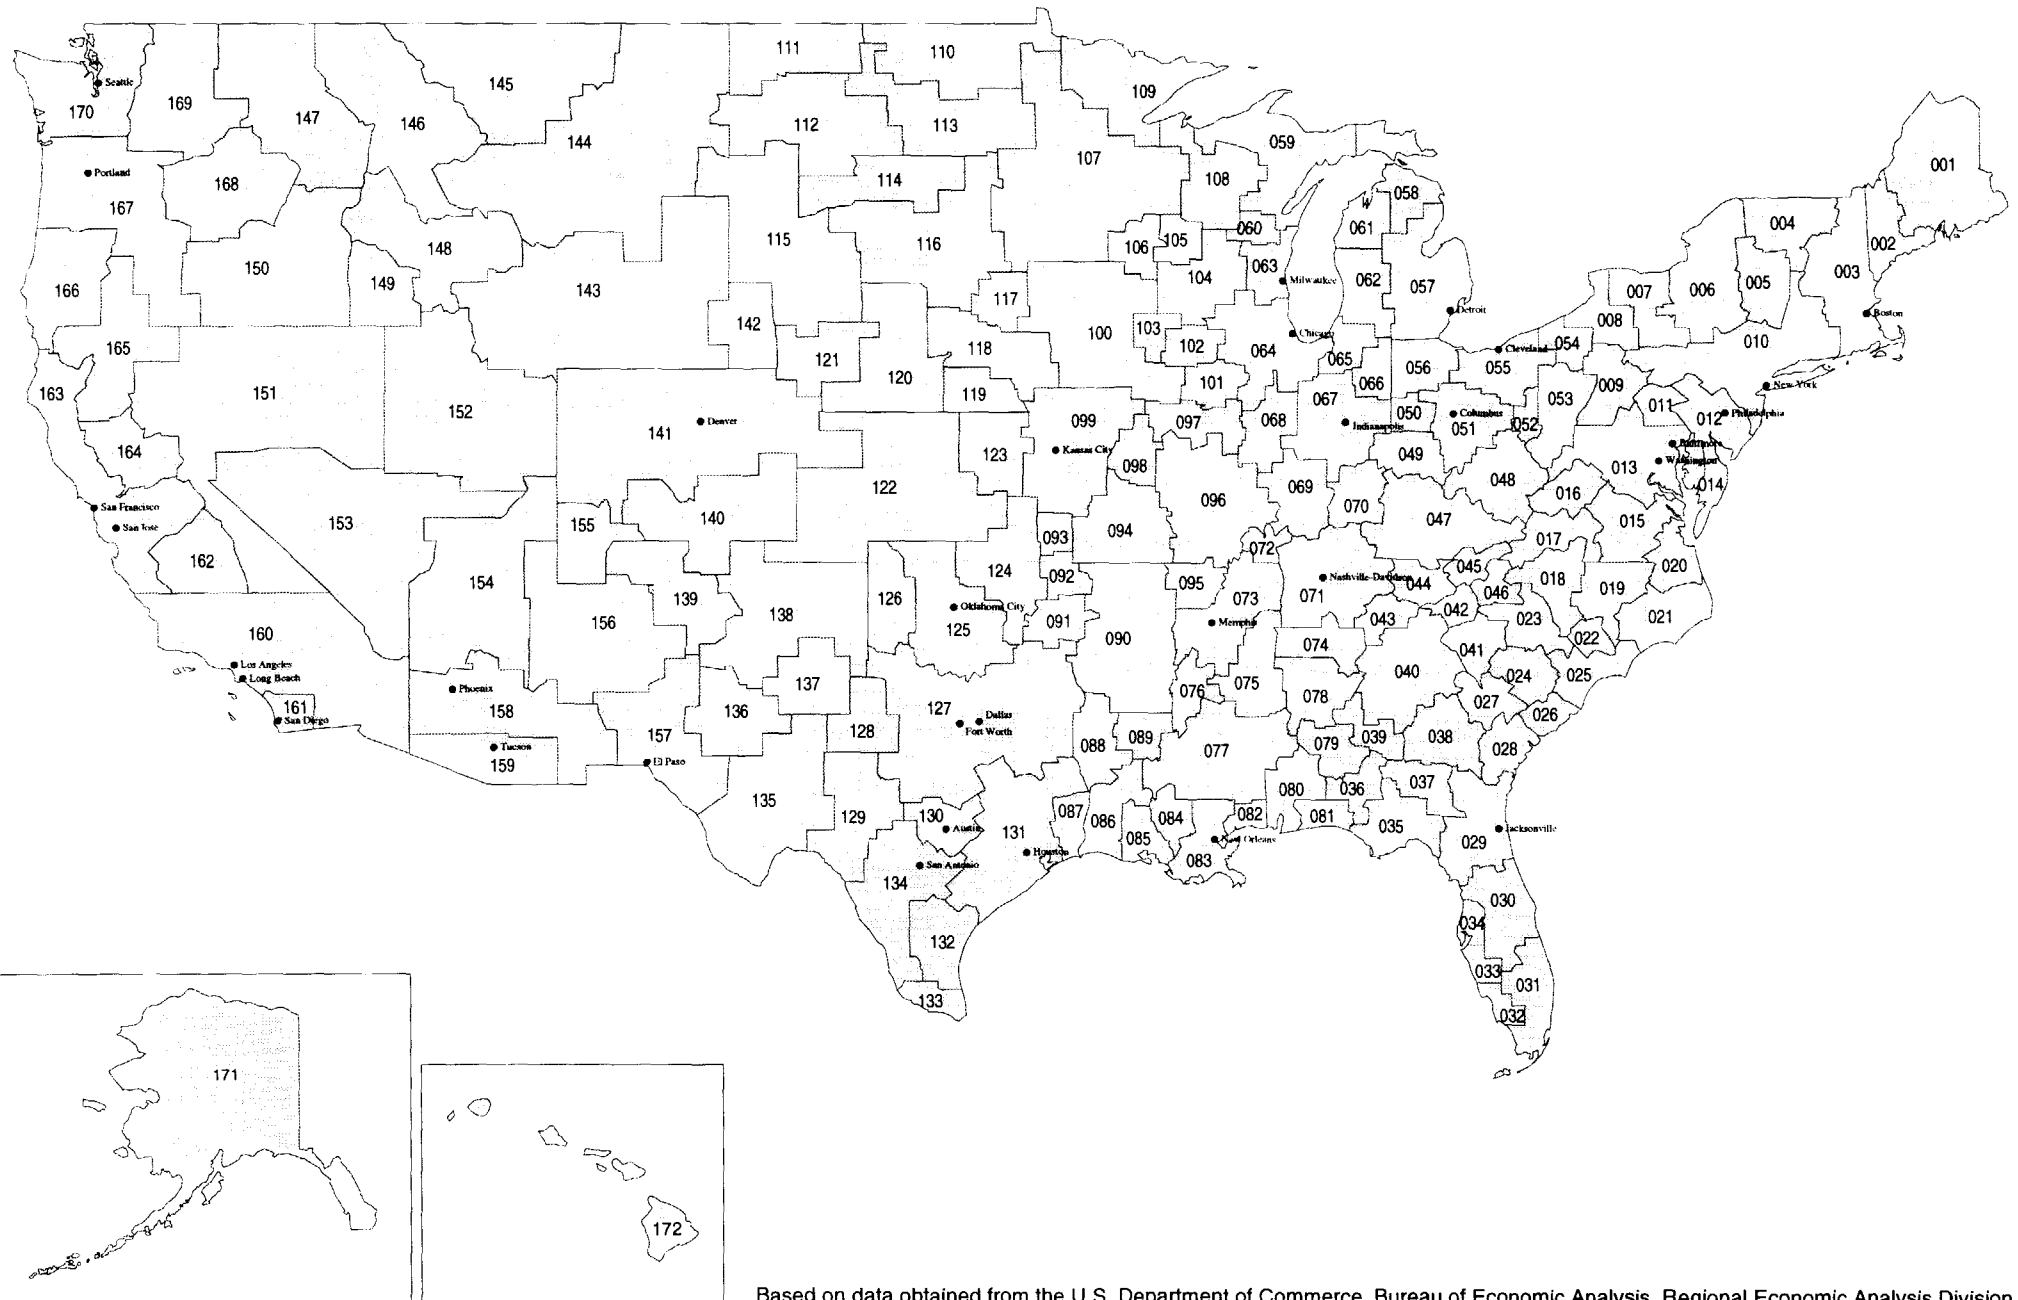

The BEA licensee may reconfigure all remaining incumbents who have received notice. No FCC approval would be needed to reconfigure. Notice may be provided at any time within the fifth year. For example, where the fourth year ends on October 1, 1999, notice must be provided by October 1, 2000. The notice period would run for six months, and reconfiguration must be completed by one year after end of the notice period. In this example, the latest that reconfiguration could be accomplished would be April 1, 2002. As noted above, the last day to give notice in this example is October 1, 2000, resulting in termination of the notice period six months later, on April 1, 2001. Reconfiguration must then be completed by April 1, 2002.

8. End of the fifth year after license issuance (e.g., October 1, 2000).

No further reconfiguration notice may be given.

Any remaining white space in the lower band would be auctioned on a BEA basis.

February 1995

Based on data obtained from the U.S. Department of Commerce, Bureau of Economic Analysis, Regional Economic Analysis Division.
